

NO_x ADSORBER CATALYST CONFIGURATIONS AND METHOD FOR REDUCING EMISSIONS

ABSTRACT

[0037] Disclosed herein is a catalyst configuration, a NO_x adsorber comprising the catalyst configuration, and a method for reducing emissions. The catalyst configuration comprises: a substrate, an underlayer disposed on the substrate, the underlayer comprising a first catalyst composition, and an overlayer disposed on a side of the underlayer opposite the substrate. The overlayer comprises a second catalyst composition comprising greater than or equal to about 75% of Rh in the catalyst configuration.
